

**In the Abstract**

Kindly amend the Abstract as follows:

a           A communication apparatus which receives image data taken by an imaging apparatus connected through a network, comprises a storage ~~means~~ for storing control information to control the imaging apparatus, and an output ~~means~~ for outputting to a display unit a synthetic image which is obtained by synthesizing a symbol representing a state of the imaging apparatus to image information indicating a setting location of the imaging apparatus in accordance with the control information stored in storage ~~means~~. Accordingly, a stored state of the imaging apparatus can be easily grasped.
